Music Intervention Summary

StressKey triggered 526 music recommendations across the period. Of the 11 stress-related events detected, the adaptive engine provided intervention coverage of approximately 100%. All interventions followed the Iso Principle, matching calming audio content to elevated stress states to support emotional regulation.

Intervention Recovery Time

Episodes	Resolved	Avg Recovery	Fastest
9	100%	41s	6s

Note: this measures the time between a stress/anger detection and the next confirmed calm, neutral, or happy state, during which a music intervention was active. It reflects observed recovery time following intervention, not a controlled measurement of the music's causal effect, as no no-intervention control condition was recorded for comparison.
